

Building a fountain

Use the "**Multi-Bords**" to build your very own fountain in no time at all:

You will need a water collecting basin (e.g. a mortar bucket), on which you then lay a suitably-sized grating. You then position your fountain stone and connect the pump, which will pump the water up from the basin when filled with water.

You then simply install the curved "**Multi-Bords**" as your 'brick well' around the fountain to the desired height (1 complete circle = 6 blocks).

You only need to place a few decorative rocks on the grating and your fountain is ready!

Extra parts needed:

- a water tank, e.g. mortar bucket
- a grating for supporting decorative rocks and the fountain stone
- a pump and accessories
- decorative rocks

(Please note: we do not offer these parts.)

CHRISTOPH
